

Check Your Course for Electronic Health Records

Looking for a starting point to prepare for national Electronic Health Records? One first step is to be sure your system includes software applications with the functions that are needed for LTPAC EHR technology.

EHR Capabilities	Keane NetSolutions	Your Current System?
Create, modify, and maintain individualized care plans	✓	
Electronically enter all resident orders including medications and immunizations	✓	
Document verbal orders, including telephone orders	✓	
Check medication orders for possible adverse interactions	✓	
Create medication orders with enough data for accurate dispensing	✓	
Generate an eMAR with list of medications for administration, order directions, and time due, with ability to chart medication administration information	✓	
Create, save, and display clinical notes and vital signs	✓	
Display and maintain scanned documents	✓	
Store, display, and print resident consent forms	✓	
Electronically create lists of residents, their problems, medications, and allergies	✓	
Notify providers that new lab results are available	✓	

This is a partial list provided for informational purposes only. For the full story on Long-Term/Post-Acute Care and Electronic Health Records, see the Keane white paper. [Click here.](#)
