

## Test Results

Connects to Laboratory, X-ray, Radiology companies for results

This interface notifies you when Laboratory and Radiology results arrive and displays them in your Keane NetSolutions system. In addition to increasing efficiency in delivering results, the software uses the data to give you graphs and trending information.

Eliminate trips to the fax machine to check for results, with notification and alerts by smart phone or email. The system lets you know when results arrive according to your setup instructions. You can view results in Keane NetSolutions including whether they are in or out of range.

Keane NetSolutions offers a simple way for authorized staff to open the results. From the summary page you can view the latest results, previous results, generate reports, and identify trends by selecting specific results to view in a graph.

### Notifications

You control the notification process by selecting the resident, delivery method (email, smart phone, text pager, etc.) and criteria, such as when results are abnormal based on the range you specify.

### How it Works

The interface works by connecting Keane NetSolutions with InteHealth, a company dedicated to improving the flow of healthcare information ([www.intehealth.com](http://www.intehealth.com)).

InteHealth communicates with the Laboratory and Radiology companies and sends results to Keane NetSolutions. InteHealth interfaces with many Lab and Radiology companies and the chances are good that your facility or hospital uses one of them. If not, InteHealth has the resources and technology to set up a new connection.

### Benefits

- Improves quality of care through quick access to results by all authorized staff
- Increases workflow efficiency in receiving and communicating results

SODIUM (NA)		135		132-145	mEq/L

**To view a resident's lab results in Keane NetSolutions simply click on the menu item in the left-side navigation bar. KNS makes the data available anytime anywhere to authorized individuals.**

## Keane NetSolutions Test Results

- Provides interfaces today in preparation for an ever-expanding array of future connections
- Complies with HIPAA regulations regarding audit, logging, and tracking
- Requires no additional hardware

### Key Features

- Displays lab and radiology results in Keane NetSolutions
- Notifies staff when results are delivered using a rules-based clinical alerting system, set up and controlled by the user
- Routes notifications securely to the user's preferred device, such as mobile text message or email
- Offers role-based controls, providing different levels of access based on role, such as nurse or DON
- Displays results data in graphs for trending identification

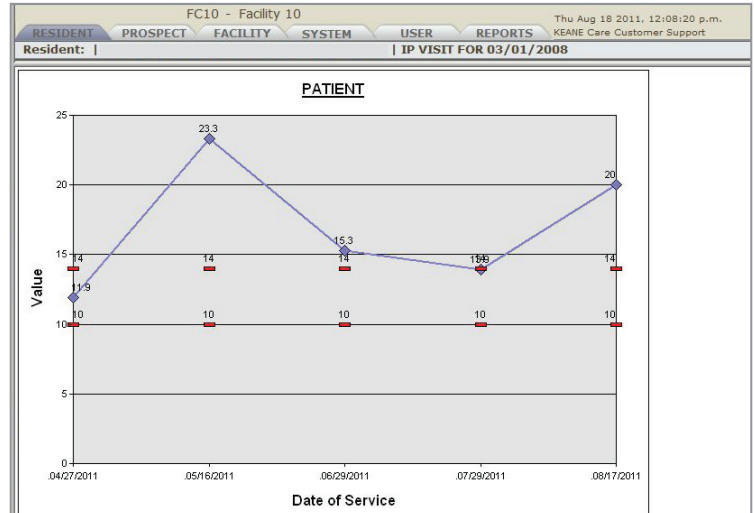

### System Information

This interface with Keane NetSolutions is licensed for a flat monthly fee per facility that covers maintenance, updates, and hosting. Customer service and one-time connection fees are not included in the flat monthly fee.

### For More Information

Please contact your Keane Sales Manager at 800-426-2675, info.ltc@keane.com or www.keanecare.com.

### Analyze results with useful tools

The interface can display results in graphs to assist you in identifying trends over time.
