

VistaKEANE

Integrated Clinical and Financial Software for Long Term and Post-Acute Care

What We Offer You

No matter where you are on the technology spectrum, Keane Care has a system for you. We offer you:

- Just the software you need today – when you need more, we'll be here
- Experience with SNFs, Assisted Living, Subacute, Rehabilitation, ICF/MR, CCRCs
- Experience with companies of all sizes
- Ten client services locations nationwide
- Stability: financial strength and longevity – we've been serving our clients since 1969
- Opportunities to network with your peers
- Regulatory and software news through Websites, newsletters, and e-mail
- A variety of ways to run your system: through local and wide-area networks, with wireless connections, standalone, on tablet PCs, and hosted remotely with Keane eHost Services

The following software makes up the VistaKEANE integrated clinical and financial system.

Resident Care Management

Admit Transfer Discharge (ADT)

Maintains resident information, including census activity for billing and shares it with clinical and financial software. Retain pre-registration information from the first contact with a resident. Look up ICD-9 codes online. Many formats available for your face sheet. On-demand reports cover census activity and resident(s) status.

Resident Assessment (for MDS 2.0)

The standard against which others are measured. It offers maximum ability to import data including therapy minutes and ADLs, and to export MDS data for billing and care plans.

It's packed with user-friendly features, for example monitors for Significant Change and MDS completion status. On-demand reports use MDS items to show resident status such as those with a stage 2 pressure ulcer and weight loss.

Update the CMS-802 form on-the-fly and drill down to the MDS responses that triggered checkmarks. It's simple to keep the form current online and to use it as a quality assurance tool.

The Cognitive Performance Scale module defines mental status using MDS data. Calculate QIs on demand with VistaKEANE Performance Measures.

Care Plan

By computerizing the care plan process, your facility can speed the initial care plan, ensure completeness, facilitate individualization, and standardize language.

Begin a care plan by selecting from a list of suggested problems based on RAPs and MDS responses. Complete the plan with goals and interventions from a library of statements. The software makes it easy to edit statements and add text to individualize them.

Physician Orders

Improves accuracy and efficiency in your facility's process for handling medication and treatment orders: data entry, communication, delivery documentation, and order maintenance.

Enterprise Scheduling

Streamlines the scheduling of residents' appointments with services and transportation.

Rehabilitation Therapy

Use to record treatment minutes and notes online and make that information instantly available for billing, the MDS, and other therapists.

The VistaKEANE System from Keane Care

VistaKEANE Rehab offers many features to help comply with Medicare regulations and assure that goals, evaluations, and treatment plans contain critical information.

User-Defined Assessments

Computerizes your facility's assessments and worksheets. It calculates scores, maintains histories, generates reports, shows trends in graphs, and provides due date reports.

Interdisciplinary Progress Notes

Entering progress notes online eliminates paper and makes notes accessible without pulling a chart. Categorize your notes to quickly extract information and identify trends.

Resident Account Management

VistaKEANE Resident Account Management (RAM) is a powerful and flexible system for accounts receivable and billing. It produces HIPAA-compliant electronic claims and accepts electronic payment in the HIPAA-compliant format.

RAM's power lies in its profile windows that accept an amazing amount of information on payor plans and residents' coverage. It uses the information to generate your claims accurately and automatically.

RAM's features for retroactive changes, coordination of benefits, collections, and electronic remittance increase cash flow and reduce AR days. It can further improve efficiency by importing resident charges from barcoding systems.

Resident Funds

Track incoming and outgoing funds in the residents' trust account with this software that also handles petty cash, interest allocation, and bank reconciliation.

Financial Management System

General Ledger and Budgeting

A powerful tool for financial record keeping, reporting, analysis, budgeting, and projections. It imports transactions from all VistaKEANE financial applications.

Offers per-patient-day statistics in budgeting and profit/loss, such as nursing hours per resident day and food costs per resident day. Search by account number, subaccounts, and department to see all entries by fiscal period, transaction, and journal entry with actual and budget data.

Accounts Payable

Superior tools for maintaining vendor information, processing invoices, writing checks, and monitoring cash requirements. Its inquiry features instantly retrieve details on vendors, invoices, checks, and payable amounts.

Payroll

VistaKEANE software automates the payroll process and maintains Human Resources information. It saves time with features such as 999 hours/earnings codes that can handle all situations including shift differentials, an interface with time clock software, and extensive on-demand reports.

Materials Management

This software application computerizes purchase orders, requisitions, price changes, and inventory levels for the storeroom, carts, and departmental supplies.

Fixed Assets

Maintains information on capital assets with a flexible system that offers a choice of depreciation methods and user-defined setup and controls.

Intellicost Enterprise Staff Scheduling

Provides both the information and the tools needed to manage staffing. It decreases time spent on scheduling and identifies opportunities to reduce overtime and use of agency staff.

Reporting Applications

Keane Analytics powered by MinePoint

Keane Analytics gathers critical real-time data from your VistaKEANE system, turns it into meaningful information, and delivers it to you through Executive Dashboards for real-time snapshots of key indicators, Workflow Alerts to notify you when conditions you set are met, and Data Mining and Reporting to identify trends.

CareTracker

A charting system that uses touchscreen devices at the point of care. Its user-friendly interface encourages complete and accurate documentation of care delivered. A product of Resource Systems, CareTracker is made up of two parts: touchscreen wall-mounted kiosks that collect data and software that imports the kiosk data, calculates MDS scores, and generates clinical and management reports.

Crystal Reports from Business Objects

Add Crystal Reports to the VistaKEANE system to increase your ability to create customized reports.
