

# NetSolutions Insight

## LTPAC Dashboards ready out of the box or create your own

NetSolutions™ Insight is business and clinical intelligence software that gives Long-Term and Post-Acute Care (LTPAC) providers dashboards to visualize, monitor, and analyze information. It is delivered with a pre-defined dashboard and Key Performance Indicators according to the package selected. Indicators cover financial and clinical topics and are specific to LTPAC.

Insight is an out-of-the-box solution that can be up and running in hours, bringing you Key Performance Indicators (KPIs) and alerts, both clinical and financial. Your dashboard can be up quickly because NTT DATA staff did the background work, building the KPIs based on our years of experience and with input from LTPAC providers like you.

We give you a choice on how you want to put Insight to work for you, offering Standard, Premium, and Unlimited packages, as well as the ability to access third-party products.

Insight will be installed on your system with multiple pre-loaded dashboard pages, each with four to seven KPIs displayed as charts, depending on the package you choose.

## User-friendly Navigation

Insight information is organized in a logical hierarchy. The main dashboard reports on multiple areas of your business through Key Performance Indicators (KPIs) that provide maximum information in minimum time. For a different perspective, you can quickly change the format of a KPI, starting with a right-click. Formats include tables, bar charts, pie charts, and gauges.

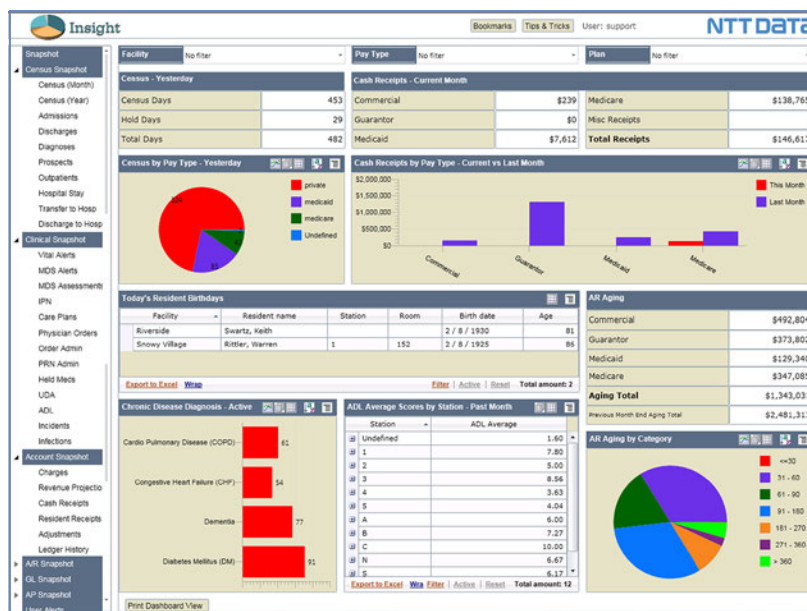

### Benefits of NetSolutions Insight

- » Quick business and clinical intelligence
- » Up-to-date exception reporting with drill down to details
- » Uses data already entered in your system
- » No coding – dashboards ready out of the box
- » Offers options: use as is, modify, or customize
- » Answers questions fast: yours, your staff's, resident's family
- » Supports multiple facilities and users
- » Supports Quality Assurance activities
- » Combines data from disparate modules
- » Improves communication of issues such as falls, census, and collections
- » Provides answers for new regulatory initiatives such as anti-psychotic drug use and hospital readmissions

### Business and Clinical Intelligence

Your dashboard displays a variety of key indicators in different formats and gives you the ability to drill down to source data.

Topics for more dashboards are listed in the left-side panel.

## Alerts

Never miss a critical event – clinical or financial – with the Insight Alerts function. You set up certain conditions, events, or dates and Insight scans your system for them. If they occur, it notifies you by email or alert charts. Alerts serve many purposes including:

- » Exception reporting: if an indicator falls outside a range of numbers you have specified
- » Reminders of scheduled events such as collections follow-up and care plan goal review
- » Event monitoring, such as an admission or a progress note category of dehydration

## Built-in Indicators

Insight will be installed with multiple dashboard pages, each with four to seven indicators, such as:

- » Change of Therapy observation
- » Transfers to hospital
- » Length of stay before discharge to hospital
- » Chronic disease diagnoses
- » ADL average scores
- » Medication administration - anti-psychotics
- » Charges by payer - current month/previous
- » AR aging
- » Census days by payor - past week
- » GL profit and loss
- » Revenue projections
- » Infection follow-up alerts

## Keane Insight Packages

Keane Insight is available in three packages, each building on the contents of the others, starting with the Standard Package. Every package includes tools to set up user-defined Alerts.

### Standard Package

The Standard Package offers the basic dashboards LTC providers need for informed decisions. Its main dashboard displays Key Performance Indicators for Census, Accounts, AR, and Clinical. Then there are sub-pages for each of those topics, for example in the Census page you'll find admissions, discharges, census by pay type, census yesterday, residents by level of care, and today's birthdays.

### Premium Package

The Premium Package expands on the Standard, adding many more pages that support those main topics. Insight Designer is included to give you tools to create your own dashboards and modify existing dashboards using events and KPIs already defined and included in the dashboards.

### Unlimited Package

This package includes the contents of the other packages and adds Insight Studio to give you the ability to capture any record or event from NetSolutions tables and from Excel spreadsheets containing data from NetSolutions. With the optional Third-Party Licensing module you can build reports from third-party databases or from spreadsheets containing data from third-party products.

#### About NTT DATA

NTT DATA is your Innovation Partner anywhere around the world.
