

Complete Financial & Clinical System

Be ready for the future with Keane NetSolutions®, a Web-based system of fully integrated financial and clinical software. It combines rich functionality with anytime/anywhere access and is the right choice for your LTC Electronic Medical Record. Our single-database system is made up of the following applications:

Resident Account Management

Admit Transfer Discharge (ADT)

Maintains resident information and census activity for all applications. Retains pre-registration information from the first contact. Displays data and links in the ADT Snapshot page (below), your electronic facesheet.

Accounts Receivable and Billing

AR-Billing is a powerful and flexible system that complies with HIPAA standards for electronic claims and payment. It power lies in its ability to accept an amazing amount of information on payor plans and residents' coverage. It uses the information to generate your claims accurately and automatically.

Increase cash flow and reduce AR days with retroactive changes, coordination of benefits, collections, and electronic remittance. AR-Billing automates procedures for therapy caps and no-pay bills. It can interface with third-party systems, including barcode, to import charges.

Resident Funds

Track incoming and outgoing funds in the residents' trust account with this software that handles petty cash, interest allocation, and bank reconciliation.

Clinical System

Resident Assessment - MDS 3.0

Our MDS 3.0 software is designed to give you ultimate assistance. Work the CAAs online with the worksheets from the RAI manual. Be ready for surveyors with CMS-672/802 forms completed automatically. Update them on the fly for quality assurance information.

Pull totals from CareTracker for six MDS 3.0 sections including ADLs. Import therapy minutes to MDS 3.0 from Therapute. Our one-step interface sends MDS 3.0 data to specialists such as PointRight, eHDS, Team TSI, and MDS Director.

Snapshots make common tasks uncommonly easy

The screenshot displays the 'ADT Snapshot' page for a resident. The interface includes a navigation menu on the left with options like 'Select Resident', 'Follow-up', and 'Sign Out'. The main content area is divided into several sections:

- RESIDENT INFORMATION:** Includes current location (SNFA251), health record number (0937), account number (619), date of birth (02/01/1920), gender (Male), and a photo of the resident.
- ADMISSION DISCHARGE TYPE ACCOUNT # HR #:** A table showing admission and discharge dates and types for different accounts.
- VISIT INFORMATION FOR ADMISSION:** A table with columns for FROM DATE, THRU DATE, LOS, LOCATION, BU/PL, LEVEL OF CARE, and HOLD TYPE.
- REIMBURSEMENT INFORMATION:** A table with columns for PLAN, PAYOR, TYPE, START DATE, END DATE, and VOID.
- CLINICAL INFORMATION:** Includes ICD-9 diagnosis codes and descriptions, and a table for BILL SEQ and CLINICAL.
- PHYSICIAN NAME, CATEGORY, ALLERGY, REACTION:** Lists medical staff and their specialties, along with allergies and reactions.
- CONTACT INFORMATION:** A table with columns for CATEGORY, CONTACT NAME, PHONE 1, PHONE 2, and RELATIONSHIP.
- GUARANTOR:** Lists guarantors and their contact information.
- ADDITIONAL INFORMATION:** Includes comments and registration status.

This ADT Snapshot is one of three Snapshots – ADT, Clinical, and Financial – that give you summaries at a glance and link you to all areas of the system. From the summaries you can drill down to source information with a click.

Care Plan

Begin a care plan by selecting from suggested problems based on CAAs and MDS 3.0 responses. Build the care plan with pre-written statements from your library or Keane's MDS 3.0 library. The software prompts you to individualize statements.

User-Defined Assessments

Computerize your paper assessments and worksheets. It calculates scores, maintains histories, generates reports, shows trends in graphs, and provides due date reports.

Electronic Medication Management

Physician Orders

Improves accuracy and efficiency in your facility's process for medication orders including data entry shortcuts, quick updates, order maintenance, and online telephone orders.

eCharting including eMAR

Replaces paper Medication Administration Records with a point-of-care system that includes nursing alerts, highlights late/missed deliveries, and prompts to add notes and vitals. The eMAR is automatically updated with information entered in Physician Orders, reducing risk and eliminating the need for month-end turnover.

Drug Interactions and Patient Education

When an order is entered in Physician Orders, this software automatically screens for adverse reactions including drug-drug, drug-allergy, drug-disease, and drug-food alerts.

Patient Education software provides medication information written for residents and their family.

ePrescribing

Streamlines medication ordering and eliminates trips to the fax machine. New medication orders are sent automatically to the resident's pharmacy by NCPDP SCRIPT message or by auto-fax according to the pharmacy's rules. Reorder a medication with a click that adds it to a list for review before sending to the appropriate pharmacy.

Document Management

Interdisciplinary Progress Notes

Online progress notes eliminates paper and gives access to authorized staff without pulling a chart. Categorize notes to quickly extract information and identify trends.

eDocuments

With eDocuments you can eliminate more paper from the medical record by importing electronic files such as scanned documents of lab results, prescriptions, and insurance cards in formats including doc, pdf, and jpg.

Quality Assurance

Improve access and accuracy in Infection Control and Incident Reporting while keeping these Quality Assurance activities separate from residents' legal health records. The software gives you tools to standardize report content while helping to ensure policies are followed and crucial data is captured.

Financial Management Applications

General Ledger

Provides control of financial record keeping, reporting, analysis, projections, and budgeting. Offers per-patient-day statistics and tools for multi-facility organizations

Accounts Payable

An automated method for maintaining vendor information, tracking discount terms, processing invoices, writing checks, and monitoring cash requirements. Offers centralized processing for multiple facilities.

Payroll, Materials Management, Fixed Assets

Reporting and Connectivity

CareTracker from Resource Systems

This charting system uses wall-mounted touchscreen devices at the point of care to encourage complete and accurate documentation of care delivered. It generates many reports and can serve as a secure employee message center. Keane's interface with CareTracker imports vitals and totals for MDS Sections C (Mood), E (Behavior), G (ADLs), H (Continence), K (height, weight, weight loss), and O (Restorative Nursing).

Therapute from Therapute, LLC

Therapute is a complete system for managing therapy in LTC. It offers quick data entry for therapists, generates real-time management information reports, supports paperless charting, and provides dashboards. Its optional interface with Keane NetSolutions exports therapy notes (using an SSL security certificate) and minutes of therapy to the MDS 3.0.

Keane Insight powered by Altosoft

Keane Insight is business and clinical intelligence software that gives LTC providers dashboards to visualize, monitor, and analyze information. It's an out-of-the-box solution that can be up and running in hours, bringing you Key Performance Indicators and alerts, both clinical and financial. Keane Insight is available in three packages.

The dashboards give you immediate information and tools to change view, filter, sort, and drill down to source data.
