

# Therapute

## Therapy Management for Long-Term Care

Therapute is a complete system for managing therapy in Long-Term Care. Updated to provide maximum assistance with FY2012 MDS / RUG changes, you can rely on Therapute to:

- Estimate RUG-IV scores with minimum input
- Report on need for Change-of-Therapy and EOT assessments
- Export therapy minutes to Keane NetSolutions MDS 3.0 software
- Report on productivity, RUG status, revenue, and much more
- Export claims data to Keane AR-Billing software
- Offer executive dashboards with drill-down and roll-up tools
- Offer quick data entry for therapists

Therapute uses treatment minutes entered by therapists for billing and real-time reporting of RUG categories, productivity, and financial data. Stay on top of outcomes with a customized dashboard that puts key indicators at your fingertips.

A product of Therapute LLC, the software was designed by therapists for efficient LTC charting. To help in the MDS process Therapute generates schedules, provides tools to optimize RUGs, calculates MDS responses, and generates a report for the MDS Coordinator.

### Tools for Optimum Payment

Therapute estimates RUG-IV scores based on actual and on ordered therapy minutes. It applies the percentages for concurrent and group therapy and it compares actual and planned RUG scores to alert staff if they are not reaching the planned RUG score.

For a more precise calculation add ADL totals and whether the patient

COT Alert												

Use this window to plan and track minutes of therapy by discipline and type: concurrent, individual and group. Assessment and grace days are highlighted. New for FY2012 is the COT (Change of Therapy) Alert row at bottom to show a COT is needed and whether the new RUG score is increased or decreased.

Patient	Last Visit Date	Variance	Next Visit Date	Next Visit Planned Minutes	Assessment	COT Date
	Date		Date	PT OT SLP	Target ARD Type Target RUG	
ARNOLD, ARNOLD (MCA)	9/8/11	(170)	9/9/11	60 50 60		9/10 ↑
BETTY, BETTY (MCA)	9/8/11	(150)	9/9/11	50 50 50		9/10 ↓
BILLE, BILLE (MCA)	9/8/11	160				
DRIVER, DRIVER (MCA)	9/8/11	(150)	9/9/11	50 50 50		9/12 ↑
MARGARET, MARGARET (MCA)	9/8/11	(170)	9/9/11	60 50 60		9/10 ↑

To help with the ongoing Change-of-Therapy review, the COT column at far right on the PPS Summary gives the COT date and RUG score arrow.

met the criteria for Extensive Services. The results are shown in the PPS Planner (see sample on reverse).

### **Tools for FY2012 Changes**

Therapute's update for FY2012 MDS 3.0 / RUG-IV changes includes an End-of-Therapy report that shows patients with a 3-day break in therapy, reporting when a Change-of-Therapy assessment is needed, and automatically dividing total group therapy minutes by 4 for RUG-IV calculations.

### **Quick Data Entry**

With Therapute, therapists begin their shifts with a worksheet that helps them plan their day, listing patients and the therapy planned by type: individual, concurrent, and group. At the end of the shift, therapists simply log in, select a resident, and enter minutes. Click Finish to update the central database. Therapute clients report that therapists usually spend 5 to 10 minutes per day on this data entry.

### **Paperless Clinical Charting**

Eliminate handwriting and filing while making information available in real time to staff and management. Use it to document features for certifications/recertifications, addendums, discharge summaries, as well as daily, weekly, and progress notes.

By developing a variety of templates for forms and documentation, Therapute gives clients choices in implementing a system that matches their standards of care and that puts staff at ease.

### **Executive Dashboards**

Your dashboard starts with the top level of information for a quick update. Drill down for a detailed view. The data can be displayed by one, some or all facilities, and by type such as SNF, hospital, and outpatient.

Possibilities for key indicators include projected income, revenue by payor type, labor and benefits by discipline, productivity statistics, RUGs summary, RUG/minutes variance, contract labor by time period, and budget with variance.

### **Extensive Management Information**

Therapute offers more than 200 on-demand reports with real-time data. All reports were adjusted for the FY 2012 group therapy rules.

Invoicing and revenue reports were added to reflect the Multiple Procedure Payment Reduction (MPPR) rules for Medicare Part B payment.

The reports were designed with therapy managers in mind, focusing on treatment, clinical outcomes, productivity and revenue.

Many reports are tools to assure appropriate RUG coding, timely MDS assessments, efficient therapy cap tracking, cost-effective staffing, and accurate billing. In multi-site organizations, Therapute's centralized database gives you access to one, some, or all facilities' data and the ability to generate real-time reports that compare and consolidate data.

### **Interface with Keane Care**

Therapute, LLC, has contracted with Keane Care to provide Therapute to Keane NetSolutions clients. As part of this agreement Keane Care has built an interface between our software and Therapute that:

- Exports resident information to Therapute
- Imports therapy minutes to KNS MDS 3.0 software
- Imports files needed to generate claims to Keane Care AR-Billing software
- Imports therapy notes to Keane's Progress Notes software in pdf format. For notes, the KNS Exchange security function must be installed, including an SSL certificate, preferably on a separate server

### **About Therapute**

Founded in January 2000

in Macon, Georgia, Therapute, LLC is a recognized industry leader in providing real-time, centralized database applications for contract therapy companies and in-house therapy programs in long-term care, serving 800 facilities nationwide.

### **System Information**

Therapute software is licensed for a flat monthly fee. It is a Web-based application that interfaces with Keane through an SSL Web Service. Accessed through desktop icons, the software is loaded on Therapute servers. The servers are located in a secure, HIPAA-compliant datacenter that provides an SAS 70 report.

As a hosted system, Therapute IT staff maintain your database and keep it current with ICD-9 codes, CPT codes, fee screen rates, CCI and LCD edit updates, as well as enhancements and new reports.
